

biography

casey sherrad, LEED® AP

consultant

Casey Sherrad is proficient at working in teams. His relational style makes him a collaborative partner with design teams and client technical staff in developing systems that meet unique programmatic needs. Casey's natural ability to design interactively makes him a valuable part of our rapid-prototyping team.

Casey is highly sought after for his critical listening skills in commissioning audio systems for stadia and auditoria. He has worked with venues such as Dodger Stadium, Angel Stadium, and Gateway Church of Austin, the Performance Center for Calvary Chapel in Florida and the National Theatre of Cyprus.

Known for his innovation in programming DSP systems for "outside-the-box" usage, Casey works to create easy user-interfaces for campus-wide functionality and integration of control systems for multiple venues. Programming is a bit of a passion for Casey, who has developed our in-house project management tool, Gerenuk and has also contributed to the design tools in the Innovation section of our website.

Casey joined Acoustic Dimensions in January of 2001 and is a consultant in our Dallas office.
