

biography

robert rose, LEED® AP

senior consultant - vp

A gifted project manager and designer, Robert Rose is adept at working with clients and design teams to generate options and develop solutions that reach their goals for the project. With a deep understanding of the interdependence of architecture and technology and almost 20 years of practical experience in design and construction, Robert is an excellent team lead with a gift for connecting vision with design.

Since joining AD in 1999, Robert's project experience includes projects for corporate, hospitality, performing arts, entertainment, transportation, sports and religious clients and his portfolio is as diverse as the 6,000-seat underground worship facility for SaRang Church in Seoul to the new Pizza Hut Headquarters in Dallas, Texas.

Robert's career in technology began almost by accident while standing in the registration line of his high school. The shop class for which he wanted to register was full, and the course next in line was electronics. The teacher persuaded him to sign up and over the next semester, Robert became fascinated with the electronics of audio-video systems. Robert went on to the University of Alabama at Huntsville and received his Electrical Engineering degree in 1993 which he credits with teaching him to research problems and analyze solutions. Then, prior to joining AD, Robert was a senior engineer with a national A/V contracting firm which gave him solid grounding in the realities of construction.

Robert is a Senior Consultant and Vice President in our Dallas office.

education

University of Alabama, Huntsville
BS in Electrical Engineering
