

biography

trey cucco

software developer

Trey Cucco is a strategic hire in 2011 to help us pursue our principles of practice: collate, automate, democratize and empower. His skill and focus is on developing software solutions to help capture internal knowledge, automate processes, and make information and skillsets accessible across teams. As part of the "democratize" trajectory, Trey's work is projected to result in new and better applications available on the INNOVATION section of our website.

Trey's passion is solving problems. In fact, part of the reason he enjoys recreational activities like running and cycling is that it frees his mind to examine different aspects of a problem and brainstorm solutions.

Prior to joining Acoustic Dimensions, Trey served as a software developer at Campbell Wilson Healthcare Consulting. Trey has a BS in mathematics from the University of Houston.

Trey serves as a software developer in our Dallas office.

education

University of Houston
Bachelor of Science in Math
