

biography

vance breshears LEED® AP

director

Vance Breshears is skilled at translating a project's core mission into design solutions that meet that purpose. Vance has provided principal design direction for over 500 projects worldwide in entertainment, sports, hospitality, education, arts and worship, working with clients such as SeaWorld, the Anaheim Angels, Opryland Hotel and the San Jose Convention Center.

He serves as the Director of Acoustic Dimensions' San Diego office and has a leadership style and an enthusiasm that drives innovative thinking. Known for his ability to define the physics of a space, he has a natural talent that allows him to sort through the symptoms and optimize transformation. As an author and featured speaker covering the topics of acoustical design, multi-channel sound system design and the use of technology to support connection in large-scale venues, Vance is sought out as an advisor and consultant for manufacturers for new product development.

Vance's career began as an officer in the USMC; he then transitioned to become part of the team at the Joiner-Rose Group in 1990. He and fellow co-worker and current partner Craig Jansen, founded Acoustic Dimensions in 1992 – a design firm dedicated to the creative integration of acoustics, technology and architectural planning.

In addition to his credentials in acoustics and technology design, Vance also holds a Commercial Pilot Certificate with single-engine, multi-engine, instrument and helicopter ratings, and serves as part of the San Diego County Sheriff's Search and Rescue.
