

projects

dodger stadium - production

Client: Los Angeles Dodgers

Location: Los Angeles, California

Project Type: New Construction

Systems Cost: \$2.2 Million

Completion: 2003

AD Scope: Production Layout & Design

For the 2003 season, AD returned to work with the Dodgers on the third phase of renovations to the stadium. Our third year of involvement with the Dodgers incorporated upgrades to the video and scoring displays in the outfield with the expansion and redesign of the live video production suite including all new equipment.

The "Dodger Vision" production control space experienced a remarkable transformation. With a clean ergonomic "luxury suite" layout, greatly enhanced site lines to the field, digital servers, digital VTRs and a digital backbone with dedicated audio and video routing. The control room now facilitates broadcast level production without the feeling of playing Twister in a truck.
