## coppell bible fellowship

**Client:** Coppell Bible Fellowship

**Location:** Coppell, Texas

**Project Type:** New Construction Conceptual

**Seat Count:** 500

**Opening:** 2009

**Architect:** TGS Architects

**Contact:** Kyle Scott

**AD Scope:** Acoustics | Stage Design | Audio | Video | Lighting

Coppell Bible Fellowship is working with TGS Architects on the renovation of their existing sanctuary. The goal of the renovation is to take the next step of enhancing the front door of the campus and creating additional fellowship and connection space.

Acoustic Dimensions was asked to provide a proposal for upgrades to the interior of the main worship center with a focus on developing the stage design. AD provided conceptual recommendations and budgets for acoustics, audio, video and lighting that were structured in a way to allow the church to plan for upgrades and phase them in as funds become available.

The new stage design presents a holistic concept that includes scenic elements, musician layout, acoustic treatment and placement of video screens to better support the church's culture and mission. We worked with the interior designer from TGS to design a color palette that made the feel of the room more warm and inviting.
