

projects

first baptist church of jacksonville

Client: First Baptist Church

Location: Jacksonville, Florida

Project Type: Renovation

Seats: 8,000

Architect: CDH Partners

Contact: Bill Chegwiddden | CDH Partners | 770.423.0016

AD Scope: Visualizations | Auditorium Consulting | Acoustics and Performance Systems Planning

Like many ministries, the First Baptist Church of Jacksonville had a worship facility that fit perfectly when it opened twenty years ago. But over the years, the ministry grew and changed. Technology changed. And though the ministry kept up with modifications, there began to be a disconnect with how well the room supported what was happening inside of it. FBC Jax worked with the architects at CDH Partners, and consultants at AD to explore what was possible within their space focusing on connecting the room to the ministry and integrating technology. Through digital design, the ministry was able to “see” what was possible and communicate that to their congregation.

Acoustic Dimensions provided seating and sightline concepts to provide better visual connection within the room, platform and choir redesign for improved communication between vocalists and musicians, acoustic recommendations, and integration of technology (audio, video and lighting design) for the spaces. AD’s 3-D modeling, renderings and animations were used to explain the proposed modifications.
