grand avenue baptist church

Client: Grand Avenue Baptist Church

Location: Fort Smith, Arkansas

Project Type: New Construction

Opening: Currently in Concept Design

Seats: 1600

Contact: Keith Clutts | Grand Avenue Baptist Church | 479.783.5161

AD Scope: Auditorium Consulting | Acoustics | Audio | Video | Lighting | Visualizations

Grand Avenue Baptist Church has been in their current worship center for many years and made a decision to evaluate what needed to happen in the space to make it serve the ministry and congregation optimally as the church continues to grow and move forward.

One of the biggest challenges for the church was the need for a quick change between contemporary and traditional services. Acoustic Dimensions' concept included a series of three tabs which would drop in front of the choir loft along with a lighting look that could be accomplished with a set of gobos.

Acoustic Dimensions lead the church in interactive sessions that allowed them to explore what is possible in the space with regard to scenic design, acoustics and performance technologies. The result was a fully developed concept design presented in full color visualizations and a 3D flythrough that would assist them in communicating their desires for the new space to others.
