the village church

Client: The Village Church

Location: Denton, Texas

Project Type: Repurpose

Seat Count: 1400

Opening: Fall 2009

Construction Cost: \$9 million

Architect: Shanks Architects

Contact: Doug Stanley | Executive Officer of Operations | 972.539.7899 x 234

AD Scope: Theatre Design Input | Conceptual Stage Design | Acoustics | Audio | Video | Lighting | Visualizations

The Village Church in Highland Village renovated a former Albertsons grocery store into a new 1400 seat worship space and children's worship area. The space was designed to support contemporary worship and video sermons, while maintaining a flat floor and terraced seating so that it can be used for a variety of events.

Acoustic Dimensions worked with the church and Shanks Architects in a rapid-prototyping process in which all of the major decisions were made in a collaborative fashion between client and design team. Using 3-D modeling and visualizations the "look" was quickly translated into visualizations and the stage design was modified as the client provided input in real-time. Our scope included theatre design input, conceptual stage design, acoustics, audio, video and lighting services.
