the church at canyon creek

Client: The Church at Canyon Creek

Location: Austin, Texas

Project Type: New Construction

Seat Count: 822

Opening: June 2003

Architect: Jackson Galloway

Contact: Damon Andrews | Worship Pastor | 512.331.7340

AD Scope: Auditorium Design | Audio | Video | Acoustics | Theatrical Lighting | Architectural Lighting

Worship services at the Church at Canyon Creek in Austin, Texas include uplifting contemporary music, inspirational drama and video that is sometimes poignant, sometimes humorous. The projection of the platform into the seating area brings the speaker closer to the congregation, then the seats are focused on that position to enhance the connecting point. In addition, the curve of the seats gives each worshipper a sense of the people around them connecting them to all of the other worshippers. The acoustics are designed so that people can hear themselves and those around them.

Acoustically, we wanted a reflective surface on the ceiling. The architect used that design specification to create beautiful wooden "clouds." The clouds contribute to the overall aesthetic and provide acoustic reflection while concealing the Unistrut catwalks. There is a drop ceiling over the platform to provide reflections to the musicians. Video projection is in 16:9 format and image-magnification video (IMAG) assists with the connection in the room by giving worshippers the ability to see the expression on the faces of the people on the platform.
