clear creek community church

Client: Clear Creek Community Church

Location: League City, Texas

Project Type: New Construction

Seat Count: 1,000 (Phase 1) | 2,500 (Phase 2)

Opening: 2002

Architect: PBK Architects

Contact: Greg Penner | Facilities Director | 281.338.5433

AD Scope: Auditorium Design | Acoustics | Audio | Video | Lighting

Clear Creek Community Church (CCCC) is a growing church with a purpose and a vision for the future. With their upbeat casual atmosphere, they gear their services to reach seeking people in the Bay Area of Houston, TX. When it came time to build a new church facility, the church wanted an auditorium designed with this purpose and vision in mind.

The acoustics contribute to the feeling of togetherness in the room. AD designed reflective surfaces in the ceiling so that reverberant energy reflects back into the congregation. The result is a sense of community when people are singing and clapping.

To accommodate the church's contemporary worship music, we specified a great deal of absorptive material on the back walls and toward the back of the ceiling. A left/center/right system was designed to support the church's music program. By utilizing loudspeakers with strong pattern control, music sounds immediate, clear and alive, without undesirable reflections into the seating area.
