Construction Cost: \$5.2 million

Contact: Sean Wiles, Executive Pastor | Bob Walker, Worship Director | 860-895-1231

AD Scope: Acoustics | Audio | Video | Lighting | Room Design Assistance | Stage Systems & Curtaining

Crossroads Community Cathedral is an Assembly of God church committed to reaching people who do not have a religious background or who have grown away from the local church. The congregation is widely diverse and uses a variety of styles within a single service, including small, weekly drama vignettes during their worship services.

Crossroads Community sought a space that supports their unique purpose-driven ministry. Their budget of \$5.2 million, included the sanctuary with foyer and backstage area, administrative offices, choir and orchestra rehearsal spaces, classrooms and a basic A/V studio. Acoustic Dimensions provided acoustics, audio systems, video production, lighting and stage systems design throughout the facility. A large production room at the rear of the sanctuary overlooks the space and provides an ideal loft for technical direction and will serve as the audio and video production room when the Church expands their ministry to include image magnification. The room acoustics were carefully planned, as were the technical systems that connect this room to the other spaces.
