## faithbridge united methodist

**Client:** Faithbridge United Methodist Church

**Location:** Spring, Texas

**Project Type:** New Construction

**Seat Count:** 1,000

**Opening:** 2006

**Architect:** RNL Design, Denver | Kendall/Heaton Assoc, Houston

**Contact:** Fred Jenkins | Reliable Construction Management | 281.414.6541

Terry Seba | Administrator, Faithbridge UMC | 281.320.7588

**AD Scope:** Audio | Video | Acoustics | Theatrical Lighting | Architectural Lighting

Faithbridge United Methodist Church wanted a multipurpose space that would primarily support their contemporary worship services but retain enough flexibility to be used for children's events and athletics during the week.

The church wanted an audio system that would create envelopment during worship, yet still maintain an intimate feel for speaking. To meet this need the loudspeaker system is a left/right configuration with left, center, right front fills. There are delay speakers to cover the far corners of the balcony. The control booths are portable, lockable rolltop desks that connect via floorboxes.

In order to keep the footprint of the stage small, all amplifiers were located in a room upstage. Monitors are primarily in-ear for the same reason.
