Organ Builder: Fratelli Ruffatti

Construction Cost: \$19.5M

Contact: Tommy Boland | Johns Creek Baptist Church | 770.623.8203

AD Scope: Acoustics | Audio | Video | Lighting | Room Design

Phase 4 of Johns Creek Baptist Church's building program called for construction of a new worship center to accommodate 2,300 people, a large choir and a new pipe organ. Choir and orchestra are a significant part of the worship program at Johns Creek Baptist Church. And while it was important for the sanctuary to support natural acoustics for the organ and choir, it still needed to maintain speech intelligibility from the platform.

This phase of the building project also included design of a new foyer, backstage area and a basic A/V studio. The lobby needed to maintain a welcoming feel to support community in the church and backstage is used for weekly services as well as seasonal productions. Plans also called for a choir rehearsal room, youth worship and lounge spaces. AD provided design for acoustics, audio systems, video projection and lighting throughout the new facility. Distributed audio and video systems were needed in the lobby and youth lounge, as well as, plans for a basic A/V studio for IMAG video and archival recording.
