seacoast possibilities center

Client: Seacoast Church

Location: Mt. Pleasant, SC

Project Type: New Construction

Seat Count: Multipurpose configurations to change by requirements

Opening: 2006

Architect: SGM Architects, Inc.

Contact: Glenn Wood | 843.881.2100 x1108

AD Scope: Acoustics | Audio | Video Projection | Theatrical Lighting Design | Basic Rigging

Acoustic Dimensions work at Seacoast Possibilities Center consisted of acoustics and performance systems design for the Children's Church, Senior High, Junior High, Upper Elementary, Lower Elementary, Pre School, Foyer and Circulation Areas.

One of the most "unique" things on this project was from the acoustic treatment standpoint. The wall panels were made in different fabric colored shapes and then applied to the wall in the Upper – Lower and Pre School rooms to better match the interior colors and concepts.

The basic rigging scope consisted of locating and specifying basic theatrical masking and backdrop draperies as well as their hanging pipes and tracks.
