tri-city baptist church

Client: Tri-City Baptist Church

Location: Independence, Missouri

Project Type: Renovation

Seat Count: 1200

Opening: 2005

Contact: Dan Nelson | 816.795.8700

AD Scope: Acoustics | Audio | Video | Lighting

The Worship Center at Tri-City Baptist Church is a 1200-seat room that was built in 1990. After 15-years, the church decided it was time to perform some long-needed renovations. They believed that the technology in the space was no longer meeting the church's performance needs, which, musically, is traditional with piano, organ, choir and orchestral accompaniment.

Acoustic Dimensions met with the church, evaluated its existing performance capabilities and provided conceptual recommendations and associated budgets for improvement to the sound system and acoustics. Once the church had decided how to proceed, we worked with them to provide the design of the systems.
