wyatt park baptist church

Client: Wyatt Park Baptist Church

Location: St. Joseph, MO

Project Type: New Construction

Seat Count: 900

Opening: July 2003

Architect: Mantel Teter Architects

Contact: Maurice LaFonte | Minister of Music | 816.232.6706

AD Scope: Audio | Acoustics | Video | Lighting | Broadcast

Wyatt Park Baptist Church moved to their new campus location in 1995 but decided not to build their new worship center until further growth had taken place in their congregation. During this time the services were held in the church's multi-purpose building. Now Wyatt Park Baptist is happy to have a worship center that was designed specifically with their ministry needs in mind.

Wyatt Park Baptist has vibrant traditional and contemporary services, and they wanted a worship center that supported and enhanced both acoustically different services. This was accomplished by designing a room with excellent natural acoustics which are desired for traditional worship services. The room's natural acoustics can be deadened for the contemporary services by pulling curtains out of hidden coves that surround the congregational area and by pulling the theatrical curtains that are on stage. The sound system is designed for both the acoustically reverberant natural room and the less reverberant curtained room.
